

NOMENAI

AI Character Name Generator

UI / UX Design Specification Document

Visual Design System · Component Library · Implementation Reference

This document is the single source of truth for all visual design decisions in NOMENAI. Every colour value, spacing unit, typography rule, and component specification here maps directly to the approved UI design shown in the project reference image.

Version 1.0 · Design Reference for Development Team

- 10. Implementation Reference 16
- 11. Designer Handoff Checklist 18

1. Design Overview & Philosophy

1.1 Core Design Identity

NOMENAI is a dark-themed AI tool designed for writers and worldbuilders. The visual identity reflects mystery, creativity, and arcane power — consistent with the fantasy/dark-fiction genre it serves.

Design Directive: Every design decision must reinforce the feeling of a high-end creative AI tool — premium, mysterious, purposeful. No bright whites, no flat colors on backgrounds, no generic UI patterns.

1.2 Design Pillars

- **Dark & Immersive:** Near-black backgrounds (#0D0D14 base) with subtle blue-violet tints. Nothing is pure black — every surface has depth.
- **Purple-Led Accent System:** A single dominant accent (#7C6AF7 — medium-saturation violet-purple) used for interactive elements, highlights, icons, and brand identity.
- **Warm Gold CTAs:** The primary action button (Generate Names) uses a gold-to-purple gradient to signal importance and creative energy.
- **Typography Hierarchy:** Sharp contrast between primary white text, secondary grey text, and tertiary dim text — all on dark surfaces.
- **Card-Based Layout:** Generated names live in elevated dark cards with icon avatars, creating a structured, scannable result panel.

1.3 Application Layout Structure

The application is divided into four structural zones:

Zone	Width / Position	Purpose
Sidebar	~70px, fixed left	Navigation icons: Home, Sparkle (AI), Bookmark, History, Theme toggle, User avatar
Input Panel	~480px, left of centre	All character parameter inputs — genre, traits, culture, gender, tone, style, count
Output Panel	~640px, right side	Generated name cards with icon, name, meaning, description, bookmark/copy actions
Top Bar	Full width, top	App title, tagline, Export All button, New Generation button

2. Colour System

2.1 Background Layer Hierarchy

Every surface in the UI is a dark colour with a cool blue-violet undertone. These are NOT pure blacks — use the exact hex values below.

Swatch / Hex	Usage Context
#0D0D14	Outermost app background — page root, behind all panels
#111118	Sidebar background, secondary panel surfaces, table alt rows
#16161F	Left input panel background, main content zone
#1A1A26	Generated name cards — the elevated result card surface
#1E1E2E	Input fields, dropdowns, export button background
#252535	Step number circle backgrounds, icon button hover states
#2A2A40	Trait tag pill backgrounds

2.2 Accent & Brand Colours

Use accent colours only where specified. Do NOT spread accent colour across all interactive elements — overuse dilutes the premium feel.

Swatch / Hex	Name	Usage
#7C6AF7	Primary Purple — Logo, steps, active nav, tag labels, h1, inputs	
#D4A017	Amber Gold — Crown/emperor icon avatar for top-ranking names	
#E8732A	Warm Orange — Fire/flame icon avatar in name result cards	
#3DAA6E	Sage Green — Leaf/nature icon avatar, Name Style dropdown icon	

#4A90D9	Steel Blue — Sword/blade icon avatar in name result cards
---------	---

2.3 Generate Button Gradient — CRITICAL

The Generate Names CTA button is the most important interactive element. It uses a precise left-to-right linear gradient. Do not approximate this — implement exactly as specified below.

Property	Value	Notes
Gradient direction	90deg (left → right)	Linear gradient, horizontal
Start colour (0%)	#C89B3C	Warm gold — left edge
Mid colour (50%)	#D4A017	Pure gold — centre
End colour (100%)	#7C6AF7	Primary purple — right edge
Border radius	12px	Rounded pill-style button
Height	56px	Full-width across input panel
Text	✦ Generate Names	White, bold, 16px. Sparkle icon precedes text.

2.4 Text Colour Hierarchy

Hex	Role	Where used
#FFFFFF	Pure white	Generated character names (large bold text in result cards)
#E8E8F0	Primary text	Main header title, section labels
#C8C8E8	Field labels	Input field labels: Genre, Traits, Cultural Influence, Gender, Tone
#9090A8	Secondary text	Subtitles, taglines, section descriptions
#7C7C98	Meaning text	The meaning line in name cards: Meaning: Shadow Emperor
#5A5A72	Description text	Short character description in name cards (smallest text)
#A8A8C8	Tag pill text	Text inside trait tag pills: Ruthless, Intelligent, Mysterious

3. Typography

3.1 Font Family

Primary font: Inter (Google Fonts). Fallback: -apple-system, BlinkMacSystemFont, 'Segoe UI', sans-serif. Load Inter 400, 500, 600, 700 weights. No serif or monospace in the UI.

3.2 Type Scale — Exact Specifications

Element	Size	Weight	Colour	Notes
App headline	36–40px	700	#E8E8F0	Create Unforgettable Characters
App tagline	15px	400	#9090A8	Below headline, describing the product
App brand name	18px	700	#FFFFFF	NOMENAI in sidebar header
App brand sub	11px	400	#9090A8	AI Character Name Generator subtitle under brand
Section heading	16px	600	#E8E8F0	Tell us about your character, Advanced Preferences
Section sub-text	13px	400	#9090A8	Descriptive hint below section heading
Input field label	13px	500	#C8C8E8	Genre, Traits, Cultural Influence etc.
Dropdown value	14px	500	#E8E8F0	Text shown in dropdown: Dark Fantasy, Male
Tag pill text	13px	500	#A8A8C8	Trait tags: Ruthless, Intelligent, Mysterious
Character name	24–26px	700	#FFFFFF	Zorvath, Ardahan, Vireen Kael etc.
Name meaning	13px	400	#7C7C98	Meaning: Shadow Emperor (below the large name)
Name description	12px	400	#5A5A72	Short character sketch at bottom of name card
Button text (CTA)	16px	600	#FFFFFF	Generate Names — bold, prominent
Button text (sec.)	14px	500	#E8E8F0	Export All, New Generation, count badge
Panel count badge	12px	400	#9090A8	10 Names Generated (top right of results panel)

4. Spacing, Layout & Border Radius

4.1 Spacing Scale

All spacing values are multiples of 4px. Use only these values — do not introduce arbitrary pixel values.

Token	Value	Used for
space-1	4px	Icon padding, hairline gaps
space-2	8px	Tag pill internal horizontal padding, icon-to-text gap
space-3	12px	Card internal padding top/bottom, between trait tags
space-4	16px	Input card internal padding, gap between form fields
space-5	20px	Name card internal padding, section spacing within panel
space-6	24px	Panel-level padding, between cards in results list
space-8	32px	Top bar padding, major section separation

4.2 Border Radius Values

Component	Radius	Notes
Input panel outer card	16px	The white-bordered rounded container holding all form fields
Name result card	12px	Each generated name card in the results column
Dropdown / select	10px	Genre, Cultural Influence, Gender, Tone, Name Style, Number of Names
Trait tag pill	20px (pill)	Fully rounded pill shape for Ruthless, Intelligent, Mysterious tags
Generate button	12px	Primary CTA with gradient background
Export All button	10px	Outlined secondary button, top-right of header
New Generation btn	10px	Solid purple button, top-right of header
Character icon avatar	12px	Dark square tile with icon, left side of each name card
Step number circle	50% (full circle)	Circles containing 1 and 2 before section headings
Sidebar nav icons	10px	Icon containers in left sidebar

4.3 Border / Divider Rules

- Input panel outer card: 1px border, colour #252535. Opacity: 100%.
- Name result card: 1px border, colour #252535. Opacity: 60% — slightly subtle.
- Dropdowns / selects: 1px border, colour #2E2E45 on default state. On focus/hover: 1px border colour #7C6AF7 (purple glow).
- Sidebar: Right border 1px, colour #1E1E2E, separates sidebar from main content.
- Results panel: Left border 1px, colour #252535, separates it from input panel.
- No box shadows — use border and background contrast only for elevation. NO drop shadows anywhere.

5. Sidebar Navigation — Component Spec

5.1 Structure

The sidebar is a fixed narrow strip on the left edge of the application. It contains icon-only navigation buttons arranged vertically.

Item	Icon	Specification
Logo icon	4-pointed star / cross	Background: #7C6AF7 filled square, 40x40px, 10px radius. Icon: white 4-pointed star.
Home (active)	Home/house icon	Active state: #252535 background, 10px radius, icon colour #FFFFFF. Size: 40x40px.
AI / Sparkle	Sparkle / star	Inactive: transparent bg, icon colour #5A5A72. Hover: #1E1E2E bg.
Bookmark	Bookmark flag	Inactive: transparent bg, icon colour #5A5A72. Hover: #1E1E2E bg.
History	Clock / recent	Inactive: transparent bg, icon colour #5A5A72. Hover: #1E1E2E bg.
Theme toggle	Moon icon	Positioned above user avatar at bottom of sidebar. Same inactive style.
User avatar	Circular photo + name	48px circle photo. Below: username text #9090A8 12px. Bottom of sidebar.

5.2 Sidebar Dimensions

- Width: 72px fixed.
- Background: #111118.
- Right border: 1px solid #1E1E2E.
- Padding: 16px horizontal, 20px top.
- Nav icon container: 44x44px, centred, 10px border radius.
- Gap between nav icons: 8px.

6. Input Panel — Component Spec

6.1 Panel Layout

- Background: #16161F.
- Width: ~480px (left side of main area).
- Padding: 24px all sides.
- The entire form sits inside a single outer card: background #1A1A26, border 1px #252535, border-radius 16px, padding 24px.

6.2 Step Section Headers

Each major section of the form is introduced by a numbered step indicator. Specification:

Step Indicator: A circle (28px diameter, background #252535, border-radius 50%) containing a number in colour #7C6AF7, font-weight 700, font-size 14px. To the right: section heading 16px 600 #E8E8F0, below it the description 13px 400 #9090A8.

Step	Heading Text	Description Text
1	Tell us about your character	The more details you provide, the better we generate.
2	Advanced Preferences	Fine-tune the style and output.

6.3 Dropdown / Select Fields

All dropdown fields share the same visual specification:

- Background: #1E1E2E.
- Border: 1px solid #2E2E45. On hover: #3A3A55. On focus: 1px solid #7C6AF7.

- Border radius: 10px.
- Height: 48px.
- Padding: 0 14px.
- Text: 14px, weight 500, colour #E8E8F0.
- Chevron icon: right-aligned, colour #5A5A72, rotates 180deg on open.
- Left icon (per field): small 16px icon with genre-specific colour (see section 2.2). Icon colour varies by selection.
- Dropdown menu: background #1E1E2E, border 1px #2E2E45, border-radius 10px. No box-shadow.
- Menu item hover: background #252535, text #FFFFFF.

6.4 Field-by-Field Specification

Field	Left Icon	Default / Example Value	Notes
Genre	Diamond/gem #7C6AF7	Dark Fantasy	Full width. Icon is a purple diamond/octahedron.
Cultural Influence	Diamond/gem #7C6AF7	Indian + Persian	Full width. Same icon as Genre.
Gender (Optional)	Person icon #5A5A72	Male	Half width (left of Tone field).
Tone	Waveform #7C6AF7	Dark & Powerful	Half width (right of Gender field).
Name Style	Leaf icon #3DAA6E	Ancient & Mythical	Half width (left of Number of Names).
Number of Names	Plus icon #5A5A72	10	Half width (right of Name Style).

6.5 Trait / Personality Tag Input

This is a tag/chip input field — NOT a dropdown. It displays existing trait tags and allows adding new ones.

- Container: same style as dropdown (bg #1E1E2E, border #2E2E45, radius 10px, min-height 48px, padding 8px 12px, flex-wrap wrap).
- Existing tag pill: background #2A2A40, border-radius 20px (full pill), padding 4px 10px 4px 12px, text 13px 500 #A8A8C8.
- Remove (x) button inside each tag: 14px, colour #5A5A72, hover #FFFFFF. Clickable area 20x20px.
- Add button: text '+ Add', 13px, colour #7C6AF7, no background, cursor pointer.
- Pre-filled traits from the design: Ruthless, Intelligent, Mysterious.
- New trait input: inline text input appears on cursor click, transparent background, text #E8E8F0.

7. Output Panel — Generated Names

7.1 Panel Header

- Background: same as main bg (#0D0D14 or transparent over main bg).
- Panel title: Generated Names — 18px, weight 600, #E8E8F0. Preceded by sparkle icon (#7C6AF7).
- Count badge: top-right, text '10 Names Generated', 12px, #9090A8.
- Divider: 1px #252535 below the header row.

7.2 Name Card — Full Spec

This is the most important UI element. Every name generated appears as a card. Precision here is non-negotiable.

Each card contains four elements arranged in a specific layout:

Element	Spec	Detail
Card container	bg #1A1A26, border 1px #252535, radius 12px, padding 20px	Full width of results column. Min-height ~100px. Vertical flex layout.
Icon avatar	56x56px, radius 12px, bg #0D0D14 or #111118	Dark square tile on the LEFT. Contains a themed icon/glyph at ~32px. Floats left of text block.
Character name	24–26px, weight 700, #FFFFFF	Full name: Zorvath / Ardahan / Vireen Kael. Largest text on card.
Meaning line	13px, weight 400, #7C7C98	Prefixed with 'Meaning: ' then the meaning text. Sits directly below the name.
Description	12px, weight 400, #5A5A72	1–2 sentence character sketch. Bottom of the text block.
Bookmark icon	20px, colour #5A5A72, top-right of card	Hover: #FFFFFF. Click: fills purple #7C6AF7 (saved state).
Copy icon	20px, colour #5A5A72, top-right next to bookmark	Two overlapping squares (copy icon). Hover: #FFFFFF. Click: brief green #3DAA6E flash.

7.3 Icon Avatar Designs — Per Name

Each name card has a unique icon avatar. From the design image, these are the five visible avatars:

Name	Icon Description	Icon Colour	Avatar Background
Zorvath	Crown with three prongs — emperor/ruler symbol	#D4A017 (amber gold)	#1A1200 (very dark gold tint)
Ardahan	Flame / fire icon — energy and ambition	#E8732A (warm orange)	#1F0E00 (very dark orange tint)
Vireen Kael	Sword / blade pointing upward	#7C6AF7 (purple)	#120F22 (very dark purple tint)
Rohitash	Sun / radiant circle with rays	#D4A017 (gold)	#1A1200 (very dark gold tint)
Zahrivan	Branching tree / arcane rune motif	#3DAA6E (green)	#061510 (very dark green tint)

IMPLEMENTATION NOTE: Icon avatars should be SVG icons (Lucide, Heroicons, or custom SVG). The avatar background is NOT just #0D0D14 — it has a faint hue matching the icon colour (e.g. a gold icon gets a dark gold-tinted background). Achieve with: background mix of icon colour at 10–15% opacity over #0D0D14.

8. Top Bar — Component Spec

8.1 Layout

The top bar spans the full width of the main content area (to the right of the sidebar). It contains four elements in a horizontal flex row.

Element	Position	Specification
Main headline	Far left, vertical flex	Create Unforgettable Characters — 36–40px, weight 700, #E8E8F0. Below: tagline 15px #9090A8.
Spacer	Middle, flex: 1	Pushes buttons to the right edge.
Export All button	Right, second from right	bg #1E1E2E, border 1px #3A3A55, radius 10px, height 42px, padding 0 18px. Left icon: download arrow #9090A8. Text: Export All — 14px 500 #E8E8F0.
New Generation btn	Far right	bg #7C6AF7 solid, border: none, radius 10px, height 42px, padding 0 18px. Left icon: sparkle star #FFFFFF. Text: New Generation — 14px 600 #FFFFFF.

8.2 Top Bar Background

- Background: #0D0D14 (same as outer app background — no separate bar background).
- Bottom border: 1px solid #1E1E2E.
- Padding: 24px horizontal, 20px vertical.

9. Interaction States & Micro-interactions

9.1 Hover States

Element	Hover Behaviour
Dropdown field	Border colour transitions from #2E2E45 → #3A3A55. Background stays same.
Name result card	Background transitions from #1A1A26 → #1E1E2E. Border #252535 → #3A3A55. Transition: 150ms ease.
Bookmark icon	Colour transitions #5A5A72 → #FFFFFF. Scale: 1 → 1.1.
Copy icon	Colour transitions #5A5A72 → #FFFFFF. Scale: 1 → 1.1.
Sidebar nav icon	Background appears: transparent → #1E1E2E, radius 10px. Icon colour #5A5A72 → #E8E8F0.
Generate button	Gradient lightens slightly (brightness: 1.1). Scale: 1 → 1.01. Transition: 100ms.
Export All / New Gen	Brightness filter: 1 → 1.15. Transition: 150ms.

9.2 Focus States

- All interactive elements: 2px outline, colour #7C6AF7, outline-offset 2px.
- Dropdown on focus: border colour changes to #7C6AF7 with a very faint purple glow (box-shadow: 0 0 3px rgba(124, 106, 247, 0.15)).
- NO hard shadows anywhere — glow effect is the ONLY exception, using rgba opacity.

9.3 Generate Button Animation

- On click: brief scale pulse — scale(0.98) for 100ms then back to 1.
- While generating: show a loading spinner (white, 16px) replacing the sparkle icon. Button remains gradient, text changes to 'Generating...'

- On completion: result cards animate in with a fade + slight upward slide (translateY: 8px → 0, opacity: 0 → 1, staggered 50ms delay per card).

9.4 Trait Tag Interactions

- Add tag: user types in the tag input area and presses Enter or comma. New tag pill animates in (scale: 0.8 → 1, opacity: 0 → 1, 150ms).
- Remove tag: click X on tag. Tag fades out (opacity: 1 → 0, scale: 1 → 0.8, 100ms).
- Tag limit: if more than 6 traits, show a counter badge '+N more' in the same pill style.

10. Implementation Reference

10.1 Recommended Tech Stack

Layer	Technology	Notes
UI Framework	Streamlit (Python)	Use st.markdown with HTML for custom components.
Custom Styling	st.markdown CSS injection	Inject <style> blocks into Streamlit to override default theme. Set theme: dark in .streamlit/config.toml.
Config.toml theme	primaryColor = #7C6AF7	Also set backgroundColor = #0D0D14, secondaryBackgroundColor = #16161F, textColor = #E8E8F0.
Font loading	Google Fonts Inter	Inject via st.markdown: Inter 400, 500, 600, 700 weights.
Icons	Lucide Icons (SVG)	Use inline SVG strings for Streamlit compatibility. Lucide has crown, flame, sword, sun, tree, sparkle icons.
AI Backend	OpenAI / Anthropic API	Prompt engineering to generate names, meanings, and descriptions based on user inputs.

10.2 Streamlit Config (config.toml)

```
[theme] primaryColor = "#7C6AF7" backgroundColor = "#0D0D14" secondaryBackgroundColor = "#16161F"
textColor = "#E8E8F0" font = "sans serif"
```

10.3 CSS Injection Template

```
st.markdown(""" <style> @import
url('https://fonts.googleapis.com/css2?family=Inter:wght@400;500;600;700&display=swap'); html, body,
[class*="css"] { font-family: 'Inter', sans-serif !important; } .stApp { background-color: #0D0D14 !important; }
.stSelectbox > div > div { background-color: #1E1E2E !important; border: 1px solid #2E2E45 !important;
border-radius: 10px !important; } .stButton > button { background: linear-gradient(90deg, #C89B3C,
#D4A017, #7C6AF7) !important; border: none !important; color: #FFF !important; border-radius: 12px
!important; height: 56px !important; } </style> """, unsafe_allow_html=True)
```

10.4 AI Prompt Template

```
SYSTEM: You are a fantasy name generator. Generate {count} character names for a {genre} story. Cultural
influence: {culture}. Gender: {gender}. Tone: {tone}. Name style: {style}. Traits/Personality: {traits}. For each
name return JSON with: name, meaning, description (1-2 sentences). Names must feel authentic to the
cultural influence. Meanings should be evocative. Descriptions should match the personality traits.
```

10.5 Absolute Do-Nots

- DO NOT use Streamlit's default white theme anywhere — every element must be overridden to dark.
- DO NOT use box-shadow anywhere except the single focus-ring exception in section 9.2.
- DO NOT use any colour not listed in this document — no grays from default Streamlit, no blues from default links.
- DO NOT use bold text for character descriptions — these must be 400 weight at 12px.
- DO NOT use borders wider than 1px anywhere.
- DO NOT approximate the Generate button gradient — implement it exactly as specified in section 2.3.
- DO NOT use rounded corners beyond 20px anywhere except full-pill trait tags.
- DO NOT render any light backgrounds — if a component defaults to white/light, override it immediately.

11. Designer Handoff Checklist

Use this checklist to verify implementation before review. Every item must be checked before the design is considered complete.

Design Item to Verify	Status
App background is #0D0D14 (not pure black)	[]
Sidebar is 72px wide with #111118 background	[]

Logo uses #7C6AF7 filled background with white 4-pointed star	☐
Input panel has #16161F background, form card #1A1A26 bg, 1px #252535 border	☐
Step circles: 28px, #252535 bg, purple number #7C6AF7	☐
Dropdowns: #1E1E2E bg, #2E2E45 border, 10px radius, 48px height	☐
Trait tags: pill shape (20px radius), #2A2A40 bg, #A8A8C8 text	☐
Generate button: gold-to-purple gradient, 12px radius, 56px height, full width	☐
Name cards: #1A1A26 bg, 1px #252535 border, 12px radius, 20px padding	☐
Name text: 24–26px, weight 700, #FFFFFF	☐
Meaning line: 13px, #7C7C98, prefixed 'Meaning: '	☐
Description: 12px, #5A5A72, weight 400	☐
Icon avatars: 56x56px, dark bg with matching hue tint, themed icon at ~32px	☐
Bookmark/copy icons: 20px, #5A5A72 default, hover #FFFFFF	☐
Font: Inter loaded at 400/500/600/700 weights	☐
No box shadows anywhere (except 3px purple focus ring)	☐
All hover transitions are 150ms ease (buttons 100ms)	☐
Card fade-in animation on generation (staggered 50ms)	☐
Top bar headline is 36–40px 700 #E8E8F0 with tagline below	☐
Export All button: #1E1E2E bg, #3A3A55 border, 10px radius, 42px height	☐
New Generation button: #7C6AF7 solid bg, white sparkle icon, 42px height	☐
AI prompt produces name, meaning, and description for each result	☐

Final sign-off: Every checkbox above must be ticked before the project is submitted for review. If any item deviates from the specification in this document, it is a design defect and must be corrected.
